APR 19 1960
WEATHER BUREAU

General Summary of Weather Conditions

February 1960 was a mild month across Canada. Temperatures were exceptionally high throughout the Atlantic Provinces, Quebec and Labrador, with temperatures from ten to twenty-seven degrees above the usual February values.

Precipitation was far above normal in a broad strip stretching from southern Ontario, Quebec and the Maritimes northward through eastern Franklin. On the other hand, snowfalls were below the usual February amounts in Labrador, in northwestern Ontario, Manitoba and Saskatchewan, in Mackenzie, and in the interior of British Columbia.

In the eastern part of the Continent, the general circulation was unusual for February. A large area of high pressure lay in the northern mid-Atlantic, blocking the normal westerly flow of air, and occasionally pushing westward to Greenland and Baffin Island. The main storm track lay, for the most part, across the southern part of the United States and along the Atlantic Coast. A number of severe storms moved through the area during the month, travelling off the Atlantic Coast of Nova Scotia, through New Brunswick to the northeast, or on occasion northward through Quebec in the direction of Ungava Bay. Eastern Canada lay, therefore, in a southerly airstream, or in easterly flows of mild Atlantic air.

In Newfoundland, February was a cloudy mild month, with less snow than usual. All stations reported temperatures well above those usual in February. The anomaly was greatest in Labrador; Goose Bay reported a record February monthly mean temperature of 25.1 degrees, twenty degrees above normal.

Snowfall was light for February throughout Newfoundland. St. John's reported only a little over half the usual snowfall. In the southern and eastern parts of the Island, the deficiency was made up by a excess of rain. St. John's had 4.97 inches of rain - over twice the usual rainfall for February. Gander reported 3.33 inches of rain, four times the February normal, 1.69 inches of which fell in twenty-four hours on the 21st; both figures are new twenty-four year records for February at Gander. In the northeastern part of the Island and in Labrador, however, total precipitation averaged about half the February normal.

February 1960 was exceptionally mild in the Maritime Provinces, but dull and stormy, with heavy rain and snow. Temperatures averaged ten to twelve degrees above the seasonal values. It was the warmest February in eighty-seven years at Sydney and in seventy-three years at Chatham. Halifax reported a mean temperature of 31.5°F. - the second highest February mean in ninety-one years of records, and within half a degree of the 32.0°F. recorded in February 1954.

Precipitation was heavy almost everywhere in the Maritimes in February, although there were small deficiencies on Cape Breton and in eastern Prince Edward Island. Rainfall almost everywhere exceeded the normal. Moncton reported 2.76 inches of rain - over three times the usual February fall. Snowfall amounts varied widely. Summerside and Sydney had about twenty inches, and Charlottetown only twelve. Halifax had thirty-six inches. In New Brunswick, snowfalls increased northward. Moncton reported only sixteen inches, nine inches below normal, and Saint John twenty-two inches, about normal; but Chatham had forty-six inches and Campbellton reported fifty-eight almost twice the usual thirty-three inches.

One of the worst snowstorms in Nova Scotia's history struck the Atlantic Coast of Nova Scotia on the 2nd to 3rd, as a deep low in the Atlantic moved to the northeast. Halifax had 29.9 inches of snow in twenty-four hours. This amount is almost twice the snowfall for an entire normal February, and far exceeds any previous twenty-four hour snowfall at Halifax. The storm was accompanied by strong winds and heavy drifting. The snowfall affected only southeastern Nova Scotia; Saint John, Moncton and Sydney received no snow from this storm. Later in the month, on the 19th, a coastal storm moving to the northeast through the Bay of Fundy brought severe gales to the Maritimes, with a wind of forty-six miles per hour, with gusts to seventy-six miles per hour, at Halifax.

In Quebec, too, February 1960 was extremely mild, windy, and dull, with abnormal rainfall and snowfall. As in the Maritimes, there were no distinct warm spells in the south but rather an almost complete absence of cold days. Night-time temperatures were particularly mild; Montreal only once, and Quebec City only twice, reported a zero reading. North of the Saguenay, temperature excesses increased; Seven Islands averaged fifteen degrees above normal, and Nitchequon nineteen, but the greatest anomaly was at Indian House Lake, which averaged twenty-seven degrees above normal.

Four severe storms affected the St. Lawrence Valley in February. On the 10th-11th, a storm moved from Illinois across Lake Huron and into central Quebec, bringing rain to the St. Lawrence Valley and snow to areas north of its path. On the 14th-15th, a coastal low moved from Cape Hatteras through Maine to Seven Islands and northward into Quebec. Montreal reported a thirteen-inch snowfall from this storm. Again on the 19th-20th, a storm moved from the Southern States directly along the Atlantic Coast and into the Bay of Fundy. The fourth storm, in the period from the 25th-27th, followed a path from the Gulf Coast to southwestern Ontario, thence along the St. Lawrence to New Brunswick, and then northward into Labrador.

Precipitation totals both of rain and snow were record-breaking at Montreal and Quebec. Quebec City had 1.38 inches of rain and 59.4 inches of snow - about two and a half times the normal snowfall and eight times the usual February amount of rain. Montreal, with three times its normal rainfall, had 52.4 inches of snow, against a long-term average of 22.8 inches. All these figures are new February records for Montreal and Quebec. Precipitation was above normal throughout the province; Fort Chimo had twenty-three inches of snow, nearly four times the February average. Because of the high temperatures, rain was not unknown in the north - even Fort Chimo had .04 inch.

It was an exceptionally windy month in Quebec; Montreal reported the highest average wind, for February, in its records.

February mean temperatures were above the seasonal normal throughout Ontario. The greatest anomaly was along the Ottawa Valley, where most stations reported temperature means six or seven degrees above the February average. As in southern Quebec, the high means were due, not to spells of unusual warmth, but to temperatures that were generally equably high, and to the absence of really cold weather.

The storm of February 10th-12th brought over an inch of rain to most areas in Southern Ontario. North of North Bay, precipitation from this storm was mostly in the form of snow; Kapuskasing had a snowfall of thirteen inches from this storm. On the 14th-15th, Ottawa had a six-inch snowfall, while areas farther west were not affected. Again, the storm of February 19th affected mainly eastern Ontario, falls in the Ottawa area ranging from nine to seventeen inches. On the other hand, the storm of the 25th-26th spread near-record snowfalls across much of Southern Ontario. This storm was particularly serious in areas near Toronto, where 13.5 inches fell in twenty-four hours - the heaviest twenty-four hour snowstorm since December 1944. Heavy drifting in the strong winds blocked even main highways for many hours.

Precipitation was, therefore, above normal in almost all areas. Rainfall was generally a little above normal, but the most serious excesses were in the form of snow. Total precipitation in the Ottawa area ranged up to six inches - over two and a half times the usual February amounts. At the Experimental Farm in Ottawa, both snowfall (47.7 inches) and total precipitation (6.17 inches) were seventy-one year records, not only for February, but for any winter month, from December to April, inclusive. Westward excesses were smaller, and there were small deficiencies along the St. Clair and Detroit Rivers and in the Bruce Peninsula. In northern Ontario, there were excesses of about a hundred per cent in the east, but west of Kapuskasing falls were generally light, averaging about half the usual February amounts. Fort William reported a very sunny month, with about a quarter the usual February snowfall.

Temperatures were above the seasonal average at most stations in the Prairie Provinces. Excesses ranged from a degree or two in the south to four to six degrees in the north. A few stations in the south reported deficiencies of about a degree. Temperatures were generally mild in the first fortnight - except for a brief cold spell about the 9th-10th - but turned much cooler in the latter half of the month. Excesses were mainly brought about by night-time temperatures rather higher than usual in February.

Precipitation was generally light across Manitoba and Saskatchewan, falls averaging about one-third to two-thirds the February normals. Falls were heavier than usual in Alberta. In most areas excesses were about forty or fifty per cent. In the region of Red Deer excesses were rather larger, and the twenty inches of snow reported by Red Deer Airport was nearly three times its usual February fall.

Few serious storms passed through the area in February, the main storm track lying well to the south. On the 7th-9th, however, a low pressure centre passing through the region gave record high winds for February at Regina and Winnipeg.

February was a relatively mild month in British Columbia. Temperature excesses were small in the southeast and southwest, but reached four to six degrees in the centre and in the north of the province. In general temperatures were higher in the first half than in the second half of the month.

Precipitation in British Columbia was on the average fairly close to the normal. There were general excesses, not large, on Vancouver Island and at most coastal stations. Vancouver and Victoria had small deficiencies. Neither station reported any snow. Almost all the rain fell in the first half of the month in a general southwesterly flow of warm moist air. The arrival of the clear cool weather of the latter part of February was accompanied by a westerly gale at Vancouver on the evening of the 20th and the early morning of the 21st. Wind speeds reached forty-five miles per hour, with gusts to 70, and there was considerable structural damage reported in the area.

In the interior precipitation was rather light for February. Deficiencies were not great, falls ranging from forty to sixty per cent of the February normals.

Temperatures in the Yukon were mild for February. Whitehorse reported a mean temperature of 13°F., six degrees above the long-term average. The anomaly was greater in the centre of the Territory; Dawson had a mean of eleven degrees above its February average. Snowfall was about twice normal at Whitehorse but a little below normal at Dawson.

Temperatures were also above the seasonal values throughout the Northwest Territories. Excesses were about five or six degrees in Mackenzie and the western islands, and about two or three in Keewatin and in the far north of Franklin. Southeast Franklin lay in the same warm Atlantic flow as Labrador, and Frobisher Bay reported a mean temperature twenty degrees above normal.

Precipitation was about half the normal amounts in Mackenzie and Keewatin. Yellowknife was an exception; the eight inches of snow that fell there is about twice the usual February fall. Falls of an inch or two of snow were about normal in most of Franklin; but in the southeast, near Davis Strait, falls were larger - the eleven inches at Clyde was over three times normal, and Frobisher Bay, with nineteen inches, had twice its usual February fall.

FEBRUARY 1960

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
